APM-Sentry

Sentry is a software platform designed for monitoring and error tracking in software applications. It helps developers identify, diagnose, and fix issues in their code.

Key Highlights

Proactive Maintenance:

Sentry's performance monitoring helped developers proactively address potential bottlenecks before they impacted users. This reduced the number of performance-related issues and improved overall application stability.

Faster Issue Resolution:

Developers received real-time alerts when issues occurred, allowing the team to address them immediately. This led to faster issue resolution.

Challenge

The development team needed a way to quickly identify and address errors and performance bottlenecks in their application.

Solution

Implement Sentry as our error tracking and monitoring solution.

Impact

Developers found Sentry's interface user-friendly and efficient, which improved their productivity in debugging and resolving issues.

Challenge

Customer complaints about errors and slow page load times, issues were causing a drop in customer satisfaction. The development team needed a way to quickly identify and address errors and performance bottlenecks in their application.

NuSolution

Implemented Sentry in AWS Cloud as a containerized application.

Impact

With Sentry, developers could quickly identify and prioritize errors. They received real-time alerts when issues occurred, allowing the team to address them immediately. This led to faster issue resolution.
